

Protect our kids, test the soil!!!!!!

Key school board and city officials **covered up a soil contamination problem** at the school for almost 4 years. The parents and teachers only found out a few months ago.

***see attachment # 1- 2010 meeting notes including discussion of not disclosing soil contamination, even to the principal!

The soil contamination found included toxic and long banned hazardous pesticides. Even though they have only tested for PCB's, other **numerous cancer causing chemicals were found on campus** which include but are not limited to the following toxic chemicals -chlordane, DET, DDE, arsenic, lead, cadmium, benzene, etc.

In 2000 the State EPA Department of Toxic Substances Control (DTSC) **falsely claimed** the land was not used for agriculture and that no hazardous material were released on site.

***see attachment # 2- letter from the DTSC

When will they test the soil for cancer causing materials and tell us the whole truth?????!!!!!!
